Group members & their contributions

Rishit Gupta	2022406	(Came up with the project idea)
Ritesh Kumar Parihar	2022407	(Aspects and scope of the project)
Ritika Thakur	2022408	(Problem statement)
Ritviek Padda	2022409	(Aspects and scope of the project)
Riya Gupta	2022410	(Background of problem and motivation)

Problem Statement

- **Non-availability of a platform that enables its users to explore the various medical services in their area often ends up resulting in them choosing the incorrect option, i.e., the more expensive or inconvenient option. This may even end up in fatalities.**

Background of problem and motivation

- **The costs of medical services like MRI, CT Scan, transplants, surgeries, etc., are increasing at a fast rate, and people not having a platform to explore their options results in them choosing the more expensive ones.**

- **Not having access to all possible options causes significant inconvenience for the patients and may result in fatalities.**

- **We want to ensure that people get good quality medical services at the most economical cost nearby.**

- **Moreover, we want to allow its users to compare all available medical centres/labs and filter out the options like costs, success rate, distance from their current location, reviews, etc., according to their needs.**

Aspects that the solution will cover

- **The aspects that our solution aims to cover are:**
  - ★ **Making the process of finding the ideal medical center more convenient, primarily through the filter option, which will help users sort through the available services as per their needs.**
  - ★ **We aim to make medical centers and their services more accessible to the general public.**
  - ★ **Providing various options to the users right at their fingertips. By doing so, users will get the opportunity to explore and find exemplary medical services in time.**

Scope of the project

- **Getting in touch with medical services quickly at low costs will not only ease people's lives but also save them.**
